

Jesús García

Full Stack Developer | ERP Systems | Backend & Database Optimization

Full Stack Developer with experience in ERP systems, backend development, and database optimization. Skilled in building scalable enterprise applications, optimizing system performance, and implementing complex business logic. Experienced in developing real-world systems from scratch and currently focused on AI-driven automation and modern web technologies.

Open to remote and hybrid opportunities, with availability for relocation.

Work Experience

Evidence Technology – Web Developer (Backend | Full Stack | ERP Systems)

March 2025 – Present

- Designed and implemented ERP modules handling complex business logic.
- Optimized SQL queries and backend processes, improving system performance.
- Refactored legacy code to enhance scalability and maintainability.
- Contributed to system stability through testing and continuous improvements.
- Participated in the design and integration of business-critical ERP features across multiple modules.

CFE – Software Development Intern (Backend | Full Stack | ERP Systems)

May 2024 – November 2024

- Developed full stack applications using Vue.js and CodeIgniter.
- Automated email systems and improved internal processes through functional testing.

Projects

Custom ERP System – Furniture Business (Freelance Project)

Description:

- Designed and developed a custom ERP system from scratch for a furniture business.
- Implemented inventory management, sales tracking, and core business workflows.
- Built backend logic and database structure to support daily operations.
- Developed a web platform to showcase products and support business operations.
- Focused on scalability and adaptability to business needs.

AI Chatbot – Personal Project

Description:

- Developed an AI-based chatbot for conversational automation.
- Integrated APIs and implemented backend logic for dynamic responses.
